

I live in the Washington, DC Metro Area. I got XM because the local radio stations around here are TERRIBLE! Every station plays the same one-hit-wonder song over and over again, simultaneously. In addition, I rely heavily on the XM Local Traffic and Weather Station for my ride to and from work every day as it is the most reliable and up-to-the-minute accurate traffic overview in the area. The local station I previously listened to prior to XM was WTOP 107.7 FM who broadcasts traffic and weather every 10 minutes on "the 8's." The traffic during rush hour is terribly brief due to their time constraint of covering other news topics, and are therefore not able to cover all the major roads in the area. When they do happen to mention road conditions for the major highways I do drive on to and from work, their information is not accurate either because they are not reporting any delays or they will report an accident and delays that have since been cleared.

PLEASE KEEP XM and encourage local stations to change their ways rather than fight against what a great majority already have come to enjoy in XM Satellite Radio!
